

rethink manufacturing. rethink offshoring. rethink robotics.

## Meet baxter™

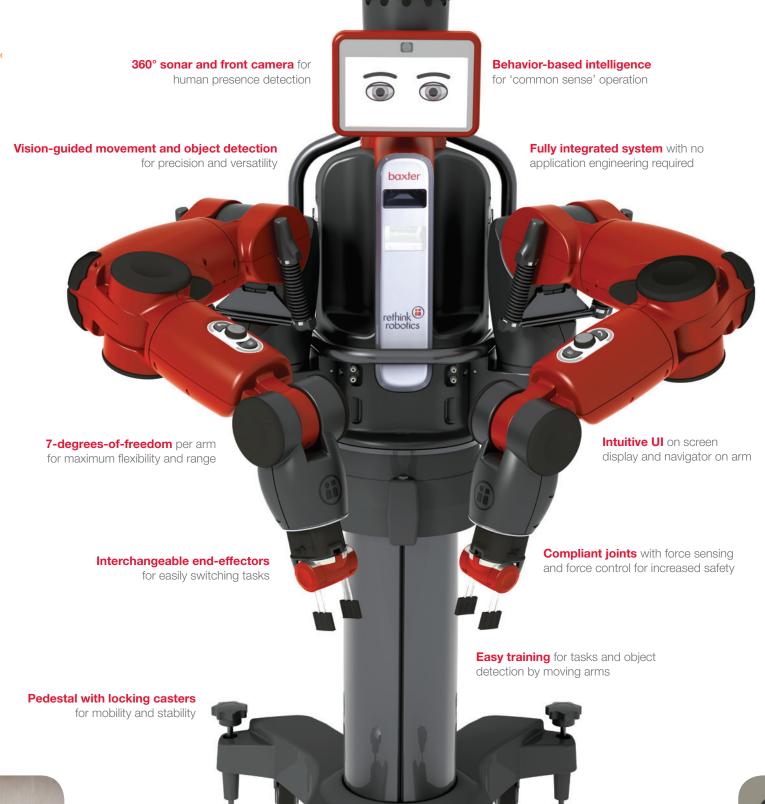

## Adaptive Robot for Manufacturing Applications.

Baxter is a revolutionary new category of robot that is redefining the way robots can be used in manufacturing environments. It performs a variety of simple, yet critical production tasks while safely and intelligently working next to people. How? Unlike traditional industrial robots, Baxter exhibits behavior-based 'common sense,' capable of sensing and adapting to its task and its environment. It requires no complex programming or costly integration. And with its uniquely low price point, Baxter provides a compelling alternative to low-cost offshoring for manufacturers of all sizes. As a result, Baxter is being introduced into a wide range of plants that could never previously consider a robotic automation solution.

### Performs a Broad Range of Simple Production Tasks.

Baxter can handle many repetitive production tasks that are typically difficult or expensive to automate, freeing human operators to focus on more value-added jobs. Baxter's initial release software includes functionality for basic discrete part handling, simple line loading/unloading, and basic packing and unpacking tasks, with more complex features and enhanced performance to follow. With future software updates, Baxter will be capable of a wide range of tasks, including:

- Material Handling
- Machine Tending
- Testing & Sorting
- Light Assembly
- Finishing Operations

#### A New Opportunity to *In-*Source.

As rising costs and increasing demand continue to push manufacturing overseas, Baxter provides a low-cost, high-return alternative to offshoring. By using it to keep those processes in-house with Baxter, manufacturers can ramp up production more cost effectively, protect intellectual property, streamline supply chains and enable a more productive, satisfied and well-trained workforce.

#### **What Makes Baxter Different?**

Baxter is a groundbreaking solution for manufacturers of all sizes. In addition to its uniquely low price point, Baxter offers six fundamental differences that distinguish it from traditional industrial robots.

- No programming. Line workers can train Baxter in minutes, with no expertise in software, robotics or engineering required. In addition, Baxter retrains quickly for fast line changeovers.
- No safety cages. Baxter was designed with a comprehensive safety system which makes it feasible for working without barriers and in close proximity to people in a production environment.
- No integration. Baxter is a complete system (hardware, software, controls, UI, safety, sensors) that can be taken out of the box, trained and working in under an hour.
- Works intelligently. Baxter is designed and programmed to perform a wide range of manufacturing and production tasks; it is aware of its environment, and automatically adjusts to changes.
- **9 Versatile and capable.** Baxter was designed to perform simple, repetitive tasks quickly and efficiently, freeing people to focus on higher-level, more value-added activities.
- **6 Extensible platform.** Baxter is a complete, yet fully extensible platform which includes all necessary software, with updates provided regularly to enhance capabilities and performance. Our Software Development Kit (SDK) will enable custom programming of specialized and proprietary tasks.

# baxter™ By Rethink Robotics.

Features	Capabilities and Benefits	Technical Specifications
Fully integrated system	No separate controller, pendant, safety cages or other devices required Ready to use out of the box, with no application engineering needed	Performance  Rated payload: 5 lbs (2.3 kg) — higher payloads possible in limited workspace  Maximum speed with no payload: 3.3 ft/s (1 m/s)
Behavior-based intelligence	Inherently capable of responding to real-world inputs in a 'common sense' manner (e.g., recognizing it must have an object in its hand before moving and releasing it)  Adaptable to varied conditions and tasks	Maximum speed with rated payload: 2 ft/s (0.6 m/s)     Up to 8-12 pick & place operations/min (total, incl. both arms)  Electrical Connections
Trainable by demonstration	Quick and easy 'training' by moving arms and joints as needed, with no programming required     'Face' screen guides user through the process and indicates the robot's status and understanding of the task	Supply voltage: 120 Volts Alternating Current Rated current: 10 Amps Rated life: 6,500 hours I/O connections: 1 Ethernet jack, 1 USB type A jack, 1 15 pin D-sub with PLC-compliant connections
Vision-guided and direct transfer capabilities	Supports a wide range of part types and locations     Vision guided detection adapts to variations in part size, placement, conveyor speed, etc. for increased versatility     Trainable to pick up objects from pre-set locations for faster performance on simple part transfer tasks	Environmental • Protection classification: IP50 • Operating temperature range: 32-104 °F (0-40 °C)
Comprehensive, easy-to-use software	Intuitive, user-friendly interface guides interaction and training     Pre-programmed for common manufacturing tasks, with frequent updates provided to increase performance and support more complex processes     Software Development Kit (SDK) will enable customization and increased programming flexibility	Physical  Robot height: 3'1" (93.98cm) (without optional pedestal)  Robot height (with optional pedestal): 5'10"-6'3" (1.78m-1.9m) depending on adjustable pedestal settings  Arm length to end-effector plate: 41" (104cm)  Torso mounting plate diameter: 13.3" (33.85cm)
Human form and proportions	Two, 7-degree-of-freedom arms provide excellent dexterity and range  Each arm can run separate tasks or the same task to double capacity  Optional pedestal provides easy mobility between workstations	for mounting on table     Body weight, without pedestal: 165 lbs (75 kg)     Degrees of freedom: 14 (7 per arm)
Comprehensive safety design	Inherently safe design, with compliant joints, back-drivable motors, protective covers and no pinch points Human collision detection to minimize contact force Emergency stop mechanisms and connectivity to external systems provide additional safeguards as needed	End-Effectors  Vacuum cup with interchangeable cups  Electric parallel gripper with interchangeable 'fingers' and user-adjustable 'fingertips'
Complex sensing of people, parts and environment	360° sonar-based detection of people and environment     5 cameras for detecting and recognizing objects, parts and workspace     Through force detection, can 'feel' contact with objects and work surfaces	Optional Pedestal  Pedestal footprint: 36"x32" (92x81cm)  Pedestal weight: 141 lbs (64 kg)
Interchangeable end-effectors	Electric parallel grippers and vacuum cups available     Custom end-effectors will be available via third-party providers for additional specialization and flexibility	Warranty One year warranty & software subscription included Extended warranty (3-year coverage) available
